SUMMARY

Software Engineer with **3 years of experience** building backend services and microservices using Java and Spring Boot, improving API performance, system reliability, and deployment efficiency in production environments. Worked on AWS-based systems handling high- volume transactions while optimizing infrastructure usage. Skilled in REST APIs, database tuning, and CI/CD pipelines, with hands-on experience in Docker and Kubernetes, contributing to scalable systems and resolving performance issues across production workloads.

TECHNICAL SKILLS

Programming: Java, JavaScript, SQL
Backend & Frameworks: Spring Boot, Spring MVC, Node.js, Express.js
Frontend: React.js
APIs & Architecture: REST APIs, Microservices Architecture, API Design, JSON, Authentication & RBAC
Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD
Databases: PostgreSQL, MySQL, MongoDB
Tools: Git, GitHub, Maven, Postman, Linux
Core Concepts: Data Structures, OOP, System Design Fundamentals, Distributed Systems, Performance Optimization

PROFESSIONAL EXPERIENCE

Software Engineer C
ItiusTech, India
Aug 2022 – Jul 2024

- Re-architected monolithic applications into Spring Boot microservices, improving system availability to 99.9% and reducing service downtime by 40% across distributed healthcare data processing platforms.
- Designed REST APIs handling over one million daily records, improving data exchange efficiency by 46% through pagination, payload optimization, and scalable service design.
- Containerized applications using Docker and deployed on Kubernetes, reducing deployment failures and improving system reliability with rolling updates and health checks.
- Improved database performance by 37% using PostgreSQL indexing and MongoDB query optimization across large datasets supporting high-volume transactional systems.
- Accelerated release cycles from weekly to daily using CI/CD pipelines, improving delivery speed while maintaining production stability and reducing manual deployment effort.

Associate Software Engineer
Cybage Software,
India Apr 2021 - Jul
2022

- Developed Node.js and React-based features supporting 100K+ users, improving application performance by 31% through frontend optimization and efficient backend integration.
- Reduced API latency by 29% by restructuring endpoints and minimizing payload size across frequently accessed services in production environments.
- Improved MySQL query performance by 42% through indexing, query tuning, and removal of redundant joins in high-traffic database operations.
- Increased development efficiency by 24% by building reusable components and standardizing code structures across shared modules.

PROJECTS

Microservices-Based Order Processing System
(Spring Boot, AWS, Docker)

- Built a microservices-based backend system using Spring Boot and REST APIs, simulating high-volume order processing, improving request handling efficiency and reducing response time by implementing asynchronous service communication patterns.
- Deployed services using Docker and AWS infrastructure, configuring autoscaling and load distribution, ensuring system stability under varying traffic conditions and improving reliability across distributed service components.

Real-Time Log Monitoring System
(Node.js, AWS, Event-Driven Architecture)

- Developed a real-time log processing system using Node.js, parsing streaming logs and identifying anomalies, reducing incident detection time by 40% through automated threshold-based alert generation.
- Implemented serverless architecture using AWS Lambda and S3 for scalable log ingestion, enabling efficient event-driven processing without manual intervention and improving system observability across applications.

EDUCATION

Master of Science, Computer Science | Aug 2024 - Jun 2026
University of Southern California, USA
Bachelor, Computer Engineering | Aug 2019 - Jun 2023
MCT's Rajiv Gandhi Institute of Technology
