SUMMARY

Software Engineer with **3+ years of experience** building scalable backend systems, APIs, automation solutions, and cloud-native applications using Python and Java. Proven success improving performance, reducing costs, increasing deployment reliability, and supporting production systems. Strong expertise in AWS, microservices, CI/CD, databases, distributed systems, and modern software engineering practices.

TECHNICAL SKILLS

Programming: Python, Java, SQL, JavaScript, Bash
Python: FastAPI, Flask, Django, Pandas, NumPy, PyTest
Java: Spring Boot, Spring MVC, Maven
Cloud & DevOps: Amazon Web Services EC2, S3, Lambda, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD
Databases: PostgreSQL, MySQL, MongoDB, Redis
Backend: REST APIs, Microservices, Authentication, RBAC, JSON, Async Processing
Tools: Git, GitHub, Linux, Postman, Jira
Core Concepts: OOP, Data Structures, System Design, Scalability, Distributed Systems, Performance Tuning

PROFESSIONAL EXPERIENCE

Software Engineer **Aug 2022 - Jul 2024 | India**
CitiusTech, India

- Re-architected monolithic applications into Spring Boot microservices, increasing availability to 99.9% and reducing downtime 40% across healthcare data processing environments significantly.
- Designed REST APIs processing one million daily records, improving exchange efficiency 46% through pagination, payload reduction, and resilient service design principles implementation.
- Built Python utilities for batch validation, reporting automation, and support workflows, reducing repetitive engineering tasks while improving issue resolution speed substantially.
- Containerized applications using Docker and deployed Kubernetes workloads, improving scalability, deployment consistency, and recovery through rolling updates with health monitoring checks.
- Improved PostgreSQL and MongoDB performance 37% through indexing, query optimization, and schema refinements supporting high-volume transactional systems across production databases reliably.
- Accelerated release cycles from weekly to daily using CI/CD automation, improving delivery speed while preserving production stability and deployment governance controls.

Associate Software Engineer **Apr 2021 - Jul 2022 | India**
Cybage Software

- Developed backend features using Python, Node.js, and JavaScript supporting 100K users, improving application performance 31% through optimized integrations and refactoring efforts.
- Reduced API latency 29% by redesigning endpoints, compressing payloads, and improving request sequencing across frequently accessed production services used daily organization-wide.
- Improved MySQL query performance 42% through indexing strategies, execution tuning, and removing redundant joins across critical workflows supporting customer transactions consistently.
- Built reusable frontend and backend components increasing development efficiency 24% while improving maintainability, consistency, and delivery speed across shared modules significantly.
- Assisted senior engineers with debugging production issues, code reviews, and release coordination, strengthening software quality while improving overall team delivery cadence.

PROJECTS

Real-Time Order Processing Platform | Python, FastAPI, PostgreSQL, Redis, AWS, Docker

- Built FastAPI services with asynchronous workflows improving transaction processing speed and supporting concurrent requests through scalable backend architecture under production-like traffic conditions.
- Implemented Redis caching, PostgreSQL indexing, and containerized deployments improving response times, reliability, and system resilience during variable demand spikes consistently.

Cloud Log Monitoring Automation | Python, AWS Lambda, S3, CloudWatch

- Developed Python log ingestion workflows reducing incident detection time 40% through automated anomaly alerts, threshold monitoring, and scalable serverless processing pipelines.

Microservices Commerce System | Java, Spring Boot, Docker, Kubernetes

- Designed modular checkout, inventory, and payment microservices improving maintainability, fault isolation, and deployment flexibility across simulated enterprise commerce workloads successfully.

EDUCATION

Master of Science, Computer Science | University of Southern California **Jun 2026 | CA, USA**
Bachelor, Computer Engineering | MCT's Rajiv Gandhi Institute of Technology **Jun 2023 | India**
